Vehicle Engine Identification

In many vehicles there may be two or more engines of the same displacement that do not take the same ignition wire set. For this reason it is essential that you match the engine code for your vehicle with the engine code listed in the Application Section of this catalog.

To locate your engine code use the chart to the right to identify the correct character to use, and then locate that character in your Vehicle Identification Number (VIN).

The most readily available spot to locate your VIN is through the front windshield on the driver's side. If you are unable to locate your VIN in that location consult your owner's manual for other possible locations.

All Spark Plug ends and one end of the Coil wire are factory finished

When determining cut length, add 1" to all measurements before cutting to allow for stripping of the wire

Apply a very small amount of dielectric grease (supplied) to the cut end of the wire and slide the desired distributor insulator approximately 4-6" up the wire

Strip 5/8" of jacket and insulation off of the core on the cut end of the wire being cautious not to nick the core

Fold the exposed core under the wire being certain that the core stays tight against the stripped end

Place the barrel of the terminal against the folded core and carefully crimp the ears of the terminal against the wire
